LR Splined Hubs Diameter

Written by David at May 13, 2012 6:25 pm

Christian, question for you please - what is the diameter of the splined wheel hubs on your LR. Many thanks

Hi David, the splined / treaded part of the hub has a diameter of 2¼", the base plate which mates with the disc has a diameter of 5".

If you ever need to separate the disc from the hub I can tell you a way of doing it...

Thanks Christian. For the moment I have no need to separate hub from disc but I recall they can be very difficult as even when in pristine condition they are nearly an interference fit. Selective heat and force come to mind

More force than heat...
