

## Lagondaforum: Keys for the Rapide

### Keys for the Rapide

*Written by SRD at May 24, 2012 10:31 am*

When I first approached several AM dealers and also ASD, I was told it was not possible to have keys cut for my car locks, since these were special locks, and I would need to get some locks made.

Well I ignored this advice, I stripped the locks down myself, and they are relatively simple Yale locks.

Here is a simple picture of the internal part of the ignition barrel:

<http://www.yorklock.com/cylinder.htm>

I have now had keys cut for my Rapide ignition and glove box.

I also attach a picture of the relay for the ignition and a simple wiring diagram if any of your wires come loose. Please do note that positions 1 and 3 on the relay are reversed to that used on the DB4. (If anyone needs this, happy to email over a clearer picture).

Wiring colors as follows: WR is predominate white with red minor; NW is predominate brown with white minor; P is purple.

A small point, when re-assembling, remember to put back the key way between the ignition barrel and the relay. otherwise, the key wil keep turning in the lock...

I now have an ignition key and glove box keys, pictures are shown.

Will remove my door lock and boot lock next, and then will have a full set of keys.

If anyone needs any help with keys or advice, please email over, happy to help.
