AB6 are correct but if sooting up then try 5s as long as you are sure your mixture is ok.

Do you have a Tripple Confuser or an SU ?

We usually convert to 14mm plugs and un shroud the plugs inside the head. Works a lot beter.

Regards,

Julian

What are the best recomendations?

What do you use today?

Mine are **NGK AB6** but find they soot up easily in queues?

Thanks Julian, I am running with twin SUs - which have been on my car for a long time, better than zeniths by all accounts? Still think I am running a bit rich, but will try AB5s to compare.

What are others using?

Hi Christopher,

SUs are a massive improvement over the Zeniths so glad you have them.

If you are running rich, just try a quarter turn in on the jets and see how it runs.

Regards,

Julian
