

Lagondaforum: Rust inside the engine block

Rust inside the engine block

Written by oakley at Apr 12, 2008 2:46 am

I am currently rebuilding my 2 Litre engine and when I opened the side plates of the block I discovered that there was an enormous amount of rust inside it. I have scraped and wire-brushed most of it away so that there is a thin rusty layer left.

I was thinking - would it be a good idea to treat everything, including the outside cylinder walls, with Kurust before I put the side plates back? Ideas or advice anyone?
